A Historical Review and Analysis of Army Physical Readiness Training and Assessment Whitfield East 2013-12 "The Drillmaster of Valley Forge-Baron Von Steuben-correctly noted in his "Blue Book" how physical conditioning and health (which he found woefully missing when he joined Washington's camp) would always be directly linked to individual and unit discipline, courage in the fight, and victory on the battlefield. That remains true today. Even an amateur historian, choosing any study on the performance of units in combat, quickly discovers how the levels of conditioning and physical performance of Soldiers is directly proportional to success or failure in the field. In this monograph, Dr. Whitfield "Chip" East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers for the physical demands of combat. Our culture is becoming increasingly "unfit," due to poor nutrition, a lack of adequate and formal exercise, and too much technology. Still, the Soldiers who come to our Army from our society will be asked to fight in increasingly complex and demanding conflicts, and they must be prepared through new, unique, and scientifically based techniques. So while Dr. East's monograph is a fascinating history, it is also a required call for all leaders to better understand the science and the art of physical preparation for the battlefield. It was and is important for us to get this area of training right, because getting it right means a better chance for success in combat.

DNA and RNA Modification Enzymes Henri Grosjean 2009-06-11 This volume is a timely and comprehensive description of the many facets of DNA and RNA modification-editing processes and to some extent repair mechanisms. Each chapter offers fundamental principles as well as up to date information on recent advances in the field (up to end 2008). They ended by a short 'conclusion and future prospect' section and an exhaustive list of 35 to up to 257 references (in average 87). Contributors are geneticists, structural enzymologists and molecular biologists working at the forefront of this exciting, fast-moving and diverse field of researches. This book will be a major interest to PhD students and University teachers alike. It will also serve as an invaluable reference tool for new researchers in the field, as well as for specialists of RNA modification enzymes generally not well informed about what is going on in similar processes acting on DNA and vice-versa for specialists of the DNA modification-editing and repair processes usually not much acquainted with what is going on in the RNA maturation field. The book is subdivided into 41 chapters (740 pages). The common links between them are mainly the enzymatic aspects of the different modification-editing and repair machineries: structural, mechanistic, functional and evolutionary aspects. It starts with two general and historical overview of the discovery of modified nucleosides in DNA and RNA and corresponding modification-editing enzymes. Then follows eleven chapters on DNA modification and editing (mechanistic and functional aspects). Two additional chapters cover problems related to DNA/RNA repair and base editing by C-to-U deaminases, followed by three chapters on RNA editing by C-to-U and A-to-I type of deamination. Discussions about interplay between DNA and RNA modifications and the emergence of DNA are covered in two independent chapters, followed by twenty chapters on different but complementary aspects of RNA modification enzymes and their cellular implications. The last chapter concerns the description of the present state-of-the art for incorporating modified nucleosides by in vitro chemical synthesis. At the end of the book, six appendices give useful details on modified nucleosides, modification-editing enzymes and nucleosides analogs. This information is usually difficult to obtain from current scientific literature.

Epidemiology of the Rheumatic Diseases Alan J. Silman 1993 The book is a reference work reviewing in detail currently available data on the epidemiology of the major rheumatic and musculoskeletal diseases. The volume considers the problems of disease definition and criteria, data on the occurrence of these diseases, both prevalence and incidence, and describes their variation with age, sex, geographical area, ethnic group, and trends over time. Also reviewed are results of epidemiological investigations looking at risk factors, both genetic and environmental. The results of family and twin studies are considered together with new data from immunogenetics and molecular biology. The impact of specific diseases on survival is also considered.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Innate Immunity and Inflammation Ruslan Medzhitov 2014-10-01 The innate immune system is rapidly activated in response to infection and injury. It is a generic rather than pathogen-specific response that recruits immune cells, promotes inflammation, and mobilizes the adaptive immune system. Excessive or chronic inflammation may cause tissue damage, so a careful balance is required to restore homeostasis. Written and edited by experts in the field, this collection from Cold Spring Harbor Perspectives in Biology reviews the cellular and molecular mechanisms involved in innate immunity and all types of inflammation. The contributors examine the cell types that make up the innate immune system, their use of pattern recognition receptors (e.g., Toll-like receptors) to identify pathogens and damaged tissues, and how they trigger signaling pathways that culminate in inflammation, pathogen destruction, and tissue repair. The numerous chemical signals and factors involved in innate immunity and inflammation are described, as are those that keep inflammation in check. The authors also discuss the diseases that can result when these processes go awry, such as rheumatoid arthritis and cancer. This volume is therefore a valuable reference for all immunologists, cell biologists, and medical scientists wishing to understand these protective processes and their implications for human health and disease.

Angiogenesis Assays Carolyn A. Staton 2007-01-11 Angiogenesis, the development of new blood vessels from the existing vasculature, is essential for physiological growth and over 18,000 research articles have been published describing the role of angiogenesis in over 70 different diseases, including cancer, diabetic retinopathy, rheumatoid arthritis and psoriasis. One of the most important technical challenges in such studies has been finding suitable methods for assessing the effects of regulators of eh angiogenic response. While increasing numbers of angiogenesis assays are being described both in vitro and in vivo, it is often still necessary to use a combination of assays to identify the cellular and molecular events in angiogenesis and the full range of effects of a given test protein. Although the endothelial cell - its migration, proliferation, differentiation and structural rearrangement - is central to the angiogenic process, it is not the only cell type involved. The supporting cells, the extracellular matrix and the circulating blood with its cellular and humoral components also contribute. In this book, experts in the use of a diverse range of assays outline key components of these and give a critical appraisal of their strengths and weaknesses. Examples include assays for the proliferation, migration and differentiation of endothelial cells in vitro, vessel outgrowth from organ cultures, assessment of endothelial and mural cell interactions, and such in vivo assays as the chick chorioallantoic membrane, zebrafish, corneal, chamber and tumour angiogenesis models. These are followed by a critical analysis of the biological end-points currently being used in clinical trials to assess the clinical efficacy of anti-angiogenic drugs, which leads into a discussion of the direction future studies should take. This valuable book is of interest to research scientists currently working on angiogenesis in both the academic community and in the biotechnology and pharmaceutical industries. Relevant disciplines include cell and molecular biology, oncology, cardiovascular research, biotechnology, pharmacology, pathology and physiology.

The final section is focused on the association between nutrition and immunity and how deficiencies in certain nutrients may affect immunocompetence. The conclusion section collates the earlier chapters and discusses paradigm shifts in the field whereby new futuristic directions are also envisioned. Conceptualizes the key features in natural products which can boost immune function and immune health Explains the intricate mechanistic aspects and balance behind immune health Presents the pathophysiology of several diseases associated with immune system disruption

Writing History in the Digital Age Jack Dougherty 2013-10-28 Writing History in the Digital Age began as a "what-if" experiment by posing a question: How have Internet technologies influenced how historians think, teach, author, and publish? To illustrate their answer, the contributors agreed to share the stages of their book-in-progress as it was constructed on the public web. To facilitate this innovative volume, editors Jack Dougherty and Kristen Nawrotzki designed a born-digital, open-access, and open peer review process to capture commentary from appointed experts and general readers. A customized WordPress plug-in allowed audiences to add page- and paragraph-level comments to the manuscript, transforming it into a socially networked text. The initial six-week proposal phase generated over 250 comments, and the subsequent eight-week public review of full drafts drew 942 additional comments from readers across different parts of the globe. The finished product now presents 20 essays from a wide array of notable scholars, each examining (and then breaking apart and reexamining) if and how digital and emergent technologies have changed the historical profession.

Empowering Student Researchers Bethanie Pletcher 2021-10-05 This yearbook is a project of the Consortium for Educational Development, Evaluation and Research (CEDER), the research and development arm of the College of Education and Human Development at Texas A&M University-Corpus Christi. With this edition of the CEDER Yearbook, the editors wished to support student researchers as emerging scholars. Participating in research projects entails many benefits for students, including the onboarding of new teaching methods and strategies, becoming a reflective practitioner, engaging in a different model of professional learning, learning how to behave like a researcher, improving writing skills, and pursuing further degrees. Collaboration between faculty members and students (often teacher or pre-service teacher researchers) is critical (Brew, 2013; Johnson, 2000; Ries, 2018). Strickland (1988) posits that teacher researchers need to be engaged in every step of the research process and allowed to take ownership of the work. It should be thought of as helping to create lifelong researchers, for "if students are properly trained, prepared, and supervised, the student-faculty collaboration can be a memorable and successful experience. It may even inspire the career goal of a future professor or two" (Fenn, 2010, p. 259). The call for proposals asked for empirical, conceptual and theoretical contributions to the area of research conducted by students. Personal Perspectives and Research Focus of students include the following categories: Culture, International Students, Men of Color, Teaching, Doctoral Students, Latino/a Culture, STEM, LBGTQ, Policy and Administration, Student Faculty, and Curriculum. The intended audience for this yearbook includes educators, decision-makers, policymakers, and leaders within faculty and student development programs as well as international student departments. A call for proposals was issued to a variety of universities and professional organizations. Two hundred and sixty-four articles from a total of 217 authors representing 72 universities were submitted. Those blinded articles were distributed to a panel of reviewers. Each article was seen by two reviewers and the editors of the yearbook. The editorial team selected 21 articles for inclusion in this yearbook.

Individuality in Language Change Lynn Anthonissen 2021-10-25 Linguists have typically studied language change at the aggregate level of speech communities, yet key mechanisms of change such as analogy and automation operate within the minds of individual language users. Drawing on lifespan data from 50 authors and the intriguing case of the special passives in the history of English, this study addresses three fundamental issues relating to individuality in language change: (i) how variation and change at the individual level interact with change at the community level; (ii) how much innovation and change is possible across the adult lifespan; (iii) and to what extent related linguistic patterns are associated in individual cognition. As one of the first large-scale empirical studies to systematically link individual- and community-based perspectives in language change, this volume breaks new ground in our understanding of language as a complex adaptive system.

Symbiotic Interaction Luciano Gamberini 2017-04-21 This book is published open access under a CC BY license. This book constitutes the proceedings of the 5th International Workshop on Symbiotic Interaction, Symbiotic 2016, held in Padua, Italy, in October 2016. The 12 full papers and 3 short papers presented in this volume were carefully reviewed and selected from 23 submissions. The idea of symbiotic systems put forward in this workshop capitalizes on the computers' ability to implicitly detect the users goals, preferences or/and psycho-physiological states and thereby enhancing human-computer interaction (HCI). The papers present an overview of the symbiotic relationships between humans and computers with emphasis on user-driven research on symbiotic systems, adaptive systems, implicit input data, physiological computing and BCI, but also on understanding the nature of the interdependence and agency between computers and humans more broadly.
